

**Surrey County Council
Wetspot List 2020
Published January 2021**

SURREY
COUNTY COUNCIL

Background

Score

Each wetspot is assessed and given a score. A number of factors are taken into account when assessing each site, but the key things that contribute to a high score include:

- Risk to safety
- Property flooding
- Disruption to critical services
- Social and economic impacts
- Long duration and/or high frequency of flooding

All of this information is analysed, and the overall score calculated. The score is a fact-based assessment to reflect the severity of the flood risk.

Wetspot Score	Risk Level
Less than 50	Lower
Between 50 and 150	Medium
More than 150	High

We prioritise work to the highest scoring wetspots and review the Medium and High categories annually with the Local Highways Teams. The score of all wetspots will be updated with the most recent information as it is received.

Status

There are four wetspot statuses:

- **Current** - The wetspot is an active flooding location but has not yet been prioritised for work
- **In progress** - The wetspot is being investigated for works to mitigate the risk; either through our works or through third party negotiations.
- **Resolved** - Works have already been carried out to try to reduce the flooding and the site is awaiting review during a heavy rainfall event to ensure the works have been successful
- **Dormant** - The wetspot has no recorded instances of flooding within the last two years and is being kept for information only.
