All data is publicly available. Data is shown by specimen date - reporting delays mean data can be incomplete for the most recent days.

For this reason the data shown is for the seven-day period ending four days prior to the publication date.

The rate is calculated daily by Surrey County Council Public Health data intelligence team using the ONS 2019 mid-year population estimates.

The 7-day average line on the chart is calculated using the average of cases for three days before, the date itself and the three days after any specific date. The average is not calculated for the most recent three dates as there is not enough data.

For more detail please refer to the Surrey COVID Intelligence Summary at www.surreycc.gov.uk/covidcases and coronavirus.data.gov.uk
