Paving the way for improved cycling in Woking town centre

New cycle parking facilities on Addison Road (image 1) Improvements being delivered on Chertsey Road (image 2) and Chobham Road (image 3)

A series of improvements along Chertsey Road and Chobham Road have improved cycling conditions through Woking town centre. Improved surfacing, the introduction of dropped kerbing and the installation of traffic bollards on Chobham Road has made the route easier, safer, and more attractive to cycle along. New cycle parking has also been installed on Addison Road, with more cycle parking to be installed in Church Street East soon.

Improvements to your bus stops are underway

Work is underway to make more bus stops across Woking accessible, the first step in our plan for better bus stops in the town. This initial work introduced raised kerbs that reduce the step between the bus and the pavement, and more space for buses to pull in and line up with the pavement edge. These improvements will make the bus easier to use for everyone, and particularly those with reduced mobility, as well as those with small children or luggage. The first batch of bus stop improvement works have already been rolled out, with the second and third batches now starting to be rolled out along the 34, 35 and 91 bus routes towards Kingfield, Westfield and Mayford in the south and St John's, Goldsworth Park and Knaphill in the west.

Once these kerb line improvements have been completed and the electrical foundations are in place, new bus shelters will begin to be installed at a number of key bus stops in Woking. These shelters will feature real-time bus departure displays, as well as providing new seating, lighting and improved information about the local bus network for those who are considering opting to try the local bus network as a more sustainable means of making trips around Woking and the local area. Improving the attractiveness of Woking's bus stops not only makes it a more pleasant experience for those who already use the network, but more importantly the network becomes more attractive to new patrons, helping increase bus patronage and drive down congestion linked to high traffic volumes in and around the town.

Stay up to date

This newsletter is correct as of 13 August 2021.

Regular updates and plans for the Woking Sustainable Transport Package project and all of Surrey County Council's other major transport schemes can be found on the [Major transport projects](#) web page (available on the Surrey County Council website).
